                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -1- SUBUNIT: SYMTHESIZED AS A SINGLE CHAIN PRECURSOR, WHICH IS CLEAVED INTO A LIGHT CHAIN AND A HEAVY CHAIN HELD TOGETHER BY A DISULFIDE BOND. THE ENZYME IS THEN ACTIVATED BY THROMBIN, WHICH CLEAVES A TETRADECAPEPTIDE FROM THE AMINO END OF THE HEAVY CHAIN; THIS REACTION, WHICH OCCURS AT THE SURFACE OF ENDOTHELIAL CELLS, IS STRONGLY PROMOTED BY THROMBOMODULIN.
-1- TISSUE SPECIFICITY: PLASMA; SYNTHESIZED IN THE LIVER.
-1- TISSUE SPECIFICITY: PLASMA; SYNTHESIZED IN THE LIVER.
-1- THESUE SPECIFICITY PROMOTED BY THE MODIFIED PROTEIN TO BIND CALCIUM.
-1- MISCELLANEOUS: CALCIUM ALSO BINDS, WITH STRONGER AFFINITY TO ANOTHER SITE, BEYOND THE GLA DOMAIN, THIS GLA-INDEPENDENT BINDING SITE IS NECESSARY FOR THE RECOGNITION OF THE THROMBIN-THROMBOMODULIN COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Blood coagulation; Glycoprotein; Serine protease;

c. --- SUBUNIT: Synthesized as a single chain precursor, which is cleaved into a light chain and a heavy chain held together by a disulfide bond. The airgyme is then activated by thrombin, which cleaves a tetradecapeptide from the anino end of the heavy chain; this reaction, which occurs at the surface of endothelial cells, is strongly promoted by thrombomodulin.

--- ISSUE SPECIFICITY: Plasma; synthesized in the liver.

--- PTM: The vitamin K-dependent, enzymatic carboxylation of some Glu residues allows the modified protein to bind calcium.

--- INTELLANEOUS: Calcium also binds, with stronger affinity to another site, beyond the GLA domain. This GLA-independent binding site is necessary for the recognition of the thrombin-thrombomodulin complex.

--- SIMILARITY: CONTRINS 2 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This SWISS-PROT entry is copyright. -!-FUNCTION: Protein C is a vitamin K-dependent serine protease that
-regulates blood coagulation by inactivating factors Va and VIIIa
in the presence of calcium ions and phospholipids.
-!- CATALYTIC ACTIVITY: Degradation of blood coagulation factors Va

rue productional antibodies specific for PSA and hybridomas producing them have been developed. The antibodies: (a) bind to free PSA; (b) are monoclonal antibodies: (a) bind to free PSA; (b) are monoclonal antibodies 10, 11, 16 or 22.2 and cragment, and (c) are monoclonal antibodies 10, 11, 16 or 22.2 and cor fragment, and (c) are monoclonal antibodies 10, 11, 16 or 22.2 and 15.2, 156 or 225 binding to amino acids 139-144 (EELFITP) and 55-60 (SLFHPE) respectively of free and bound PSA, or fragments. The antibodies are useful to detect PSA. For detecting free PSA only, an immunoassay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used: To detect both free and bound PSA, a second solid support with attached (differently labelled) monoclonal antibody binding free and bound PSA (especially selected from (c)) can be used either with, or in place of, the first solid support. The antibodies are useful in cancer screening, especially prostate and breast cancer. By obtaining total and free PSA (values, their ratio can be used to separate prostatic cancer. (Pca) from Collagin prostatic hyperplasia (BHP) patients. Measurement of PSA is also antibodies allow evaluation of PSA free/total ratio, enabling separation cof BPH and PCA patients with PSA values 4-10 ng/ml not previously
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; prostate specific antigen; PSA; epitope; monoclonal antibody; detection; cancer; serine protease.

prostate cancer

```
The present sequence represents a prostate specific antigen (PSA)

peptide. Monoclonal antibodies specific for PSA and hybridomas producing them have been developed. The antibodies: (a) bind to free PSA; (b) are monoclonal antibody 365 binding to amino acids 82-87 of free PSA; (b) are monoclonal antibodies 10, 11, 16 or 22.2 and 15.2, 156 or 22.5 binding to amino acids 139-144 (EELETP) and 55-60

CSEPHPE) respectively of free and bound PSA, or fragments. The antibodies are useful to detect PSA. For detecting free PSA only, an immunoassay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used. To detect both free and bound PSA, a second solid support with attached (differently labelled) monoclonal antibody binding free and bound PSA (especially selected from (c)) can be used either with, or in place of, the first solid support. The antibodies are useful in cancer screening, especially prostate and breast cancer. By obtaining total and free PSA values, their ratio can be used to separate prostatic cancer (PCa) from beingen prostatic hyperplasia (BHP) patients. Measurement of PSA is also useful after radical prostatectomy, to predict disease persistence. The antibodies allow evaluation of PSA free/foral ratio, enabling separation of BBH and PCA patients with PSA values 4-10 ng/ml not previously
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a novel peptide which has 20 contiguous amino acids derived from the 240 residue sequence of the human prostate specific antigen (PSA) (see AAW11023). The preferred peptide has two hydrophobic regions and one hydrophilic region each of about 5 as in length, arranged as follows: hydrophobic-hydrophilic-hydrophobic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen peptide derived from prostate specific antigen - does not cross react with related kallikreins, for diagnosis of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PSA; kallikrein; prostate cancer; antigenic; polyclonal antisera.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ABBS7737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions .
Polyclonal antisera specific for the antigenic peptide may be used in method for diagnosing prostate cancer in vivo or in vitro. The peptide represents a sequence unique to PSA which does not cross react with certain kallikreins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a diagnostic method for detecting human kallikrein 2 (hK2) DNA. The method comprises: (a) contacting DNA obtained by reverse transcription (RT) of RNA from a human physiological sample which comprises cells suspected of containing hK2 RNA with at least 2
                                                                                                                                                                                                                    A prostate-specific antigen (PSA) is detected by isolating mRNA from a sample, producing cDNA, and subjecting the cDNA to RT-PCR using primers specific for the human PSA coding region (given in AAT04864).
                                                                                                                                                                                                                                                                                                                               Gaps

Monoclonal antibodies specific for PSA and hybridomas producing them have been developed. The antibodies: (a) bind to free PSA; (b) are monoclonal antibody 365 binding to amino acids 82.87 of free PSA (IRNRFL) component antibody 365 binding to amino acids 81.87 of free PSA (IRNRFL) or fragment, and (c) are monoclonal antibodies 10, 11 16 or 22.2 and 15.2, 156 or 225 binding to amino acids 139-144 (EELFITP) and 55-60 (SIEMPE) respectively of free and bound PSA, or fragments. The antibodies are useful to detect PSA. For detecting free PSA only, an immunosasay comprising a solid support with attached labelled monoclonal antibody specific for free PSA (especially (b)) and a PSA standard can be used. To detect both free and bound PSA, a second solid support with attached (differently labelled) monoclonal antibody binding free and bound PSA (especially prostate and bound PSA) as escond solid support. The antibodies are useful in cancer screening, especially prostate and breast cancer. By obtaining total and free PSA (especially prostate and breast cancer. By obtaining total and free PSA (especially prostate and breast cancer. By obtaining total and free PSA (especially prostate and breast cancer. By obtaining total and free PSA (especially prostate and breast cancer. By obtaining total and pressistence. The benign prostatic hyperplasia (BHP) patients. Measurement of PSA is also useful after radical prostatectomy, to predict disease persistence. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
one cell containing hK2 in a sample which comprises at least 107 to 109 cells; and (b) detecting the presence of the amplified hK2 DNA. The method can be used for detecting, monitoring the progression of and pathologically staging prostate cancer. The present sequence represents prostate-specific antigen protein hK3.

 antibodies allow evaluation of PSA free/total ratio, enabling separation of BPH and PCa patients with PSA values 4-10~\rm ng/ml not previously possible by total PSA testing, avoiding biopsies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This polypeptide comprises human prostate-specific antigen (PSA)

Chr3. PSA levels are widely used as a prognostic indicator of prostate carcinoma. The invention provides a novel diagnostic method comprising contacting antibodies that specifically bind to method comprising contacting antibodies that specifically bind to human prostate-specific glandular kallikrein protein hRZ (see WA53950 or pro-hRZ (phKZ, see AAW45396), but not with PSA, with a sample of physiological fluid from a human. The assay is based on the discovery that phKZ is detected in the supernatant of a prostate carcinoma cell line and that hKZ is present in human physiological fluid from prostate cancer cells. The method is useful for monitoring the treatment and/or progression of prostate cancer in males that have believed the early detection of prostate cancer in males that chave BPH or a high grade prostatic neoplasia (HPGN) or whose family members have or had BPH, HPGN or a prostate cancer. Detecting levels of hAZ may provide a simple diagnostic tool for detecting or determining breast cancer. Detecting hAZ is achieved by producing an hAZ DNA from hAZ RNA by reverse transcription. The hAZ DNA obtained is then amplified by PCN and detected using probas. Determination of breast cancer may also be determined by exposing the hAZ polypepite to an agent which binds to it and then detecting the binary complex formed. The amount of complex formed correlates directly to the presence of breast cancer in the human individual. The methods can be used in the diagnosis, treatment and/or monitoring of the progression or remission of breast cancer and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Novel prostate specific antigen (PSA) for distinguishing benign prostatic hyperplasia from prostate cancer, comprises a clip at lysine 182 of the amino acid sequence of a mature form of PSA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a mature form of a novel form of prostate specific antigen (PSA). This form of PSA has at least 1 clip at Lys-182 and may additionally have 1 or more clips at Lys-1, Lys-145 and Lys-146. Preferably, the PSA contains at least 2 clips at Lys-145 and Lys-182. The novel forms of PSA exist at an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Prostate specific antigen; PSA; BPSA; benign prostatic hyperplasia; BPH; marker; diagnosis; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Prostate specific antigen specific to benign prostatic hyperplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            elevated level in patients suspected of having benign prostatic hyperplasmia (BPH) and therefore may be used as a serum marker or an immunohistological marker to help distinguish BPH from prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cancer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            THESE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel composition (A) having a total socientation of prostate-specific antigen (PSA). (A) is useful as a reference in methods for detecting PSA (a marker for prostatic cancer) in human blood or serum and to generate isoform-specific monoclonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibodies (MAb) against PSA, for use in immunological assays. (A) contains all the isoforms of PSA and can be isolated without significant formation of artefacts by autoproteolysis. Antibodies specific for particular PSA isoforms can improve diagnostic specificativ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition containing isoforms of prostate-specific antigen, useful a reference standard for analysis and for producing isoform-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                           Prostate-specific antigen; PSA; human; detection; prostatic cancer; isoform-specific monoclonal antibodies; marker.

                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                           The present sequence represents a mature form of a novel form of prostate specific antigen (PSA). This form of PSA has at least 1 clip at Lys-182 and may additionally have 1 or more clips at Lys-14. EPSA, a form of PSA that comprises at least clip at Lys-182, exists at an elevated level in the transition zone of benign prostatic hyperplasmia (BPH) tissue, compared to peripheral zone cancer and non-cancer prostate tissues. A method for distinguishing prostate cancer from BPH involves determining the ratio of proPSA and BPSA in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antigen peptide derived from prostate specific antigen - does not

                                                                                                                                                                            which is used to produce novel peptides derived from the 240 residue sequence. The preferred peptides have two hydrophoble regions and one hydrophilic regions each of about 5 as in length, arranged as follows: hydrophobic-hydrophilic-hydrophobic. Polyclonal antisera specific for the antigenic peptides may be used in a method for diagnosing prostate cancer in vivo or in vitro. The peptides represent a sequence unique to PSA which does not cross react with certain kallikreins.

Inducing a cell-mediated immune response against a target antigen, reducing undesired cells and stimulating presentation of an antigen by a cell, comprises administering a polynucleotide encoding a variant of an antigen

Claim 15; Page 122-123; 146pp; English.

response against a cell comprising a target antigen (1) in a subject, treatting a subject having undesired cells, for example tumour cells or virally infected calls (C), reducing the number of (C) in a subject, and stimulating presentation of (I) by a cell. This is done by administering a polynuclectide (II) encoding a variant of (I), so that (II) expressed in a cell and cell-mediated immune response is induced. The method can be used to treat prostate cancer, breast cancer, colorectal cancer and pancreatic cancer, as well as lymphomas and infections such as those caused by hepadnaviruses, lentiviruses (Including human immunodeficiency virus (HIV)), herpesviruses and the flaviviruses and pestiviruses. The present sequence represents the human prostate specific antigen (PSA) variant which has the signal sequence deleted, used as a target antigen in the method of the The invention relates to a method of inducing a cell-mediated immune

Sequence 6, Application US/09963896
Patent No. US2002102385A1
GENERAL INFORMATION:
APPLICANT: Lal, Preeti
Guedler, Karl J.
Corley, Wall C.
TILLE OF INVENTION: PROSTATE GROWTH-ASSOCIATED MEMBRANE PROTEINS
                                                  Sequence 946, Application US/09822827

Batent No. US20020081680A1

GENERAL INFORMATION:

APPLICANT: Xu, Jiangchun

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND

TITLE OF INVENTION: DIAGNOSIS OF PROSTATE CANCER

FILE REFERENCE: 210121.534C1

CURRENT APPLICANION NUMBER: US/09/822,827

CURRENT FILING DATE: 2001-03-28

NUMBER OF SEQ ID NOS: 982

SOFTWARE: FastSEQ for Windows Version 3.0
